

## *Crossaster papposus* (Common Sun Star)

### Priority 2 Species of Greatest Conservation Need (SGCN)

**Class:** *Asteroidea* (Sea Stars)

**Order:** *Valvatida* ()

**Family:** *Solasteridae* ()

**General comments:** none

**No Species Conservation Range Maps Available for Common Sun Star**

#### SGCN Priority Ranking - Designation Criteria:

**Risk of Extirpation:** NA

**State Special Concern or NMFS Species of Concern:** NA

**Recent Significant Declines:**

Common Sun Star is currently undergoing steep population declines, which has already led to, or if unchecked is likely to lead to, local extinction and/or range contraction.

Notes:

recent decline - Cobscook Bay; climate change - Appelhans et al., 2012; Keppel et al., 2014; understudied as by-catch, professional judgement.

**Regional Endemic:** NA

**High Regional Conservation Priority:** NA

**High Climate Change Vulnerability:**

*Crossaster papposus* is highly vulnerable to climate change.

**Understudied rare taxa:**

Recently documented or poorly surveyed rare species for which risk of extirpation is potentially high (e.g. few known occurrences) but insufficient data exist to conclusively assess distribution and status. \*criteria only qualifies for Priority 3 level SGCN\*

Notes:

recent decline - Cobscook Bay; climate change - Appelhans et al., 2012; Keppel et al., 2014; understudied as by-catch, professional judgement.

**Historical:** NA

**Culturally Significant:** NA

#### Habitats Assigned to Common Sun Star:

| Formation Name       |  | Intertidal  |
|----------------------|--|---|
| Macrogroup Name      |  | Intertidal Bedrock  |
| Habitat System Name: |  | Low-Intertidal <b>**Primary Habitat**</b> Notes: spawning   |
| Macrogroup Name      |  | Intertidal Gravel Shore   |
| Habitat System Name: |  | Lower Intertidal <b>**Primary Habitat**</b> Notes: spawning, juvenile feeding and adult feeding habitat |
| Macrogroup Name      |  | Intertidal Mollusc Reefs  |
| Habitat System Name: |  | Mussel Reef <b>**Primary Habitat**</b> Notes: spawning, juvenile feeding and adult feeding habitat      |
| Formation Name       |  | Subtidal  |
| Macrogroup Name      |  | Subtidal Coarse Gravel Bottom   |
| Habitat System Name: |  | Coarse Gravel <b>**Primary Habitat**</b> Notes: spawning, adult feeding habitat, over-wintering habitat |
| Habitat System Name: |  | Kelp Bed <b>**Primary Habitat**</b> Notes: spawning, adult feeding habitat, over-wintering habitat      |

## *Crossaster papposus* (Common Sun Star)

### Priority 2 Species of Greatest Conservation Need (SGCN)

Class: *Asteroidea* (Sea Stars)Order: *Valvatida* ()Family: *Solasteridae* ()

#### Formation Name      Subtidal

Macrogroup Name      Subtidal Mollusc Reefs

Habitat System Name: Mussel Reef    **\*\*Primary Habitat\*\***    Notes: spawning, adult feeding habitat, over-wintering habitat

Macrogroup Name      Subtidal Pelagic (Water Column)

Habitat System Name: Nearshore    Notes: larval development and dispersal

Habitat System Name: Offshore    Notes: larval development and dispersal

Macrogroup Name      Subtidal Sand Bottom

Habitat System Name: Unvegetated    **\*\*Primary Habitat\*\***    Notes: spawning, adult feeding habitat, over-wintering habitat

#### Stressors Assigned to Common Sun Star:

| Stressor Priority Level based on Severity and Actionability |                            | Moderate Severity | High Severity |
|---|----------------------------|-------------------|---------------|
|   | Highly Actionable          | Medium-High       | High          |
|   | Moderately Actionable      | Medium            | Medium-High   |
|   | Actionable with Difficulty | Low               | Low           |

#### IUCN Level 1 Threat      Pollution

IUCN Level 2 Threat:      Agricultural and Forestry Effluents

Severity: Severe

Actionability: Moderately actionable

**Notes:** Echinoderm larvae are exceptionally sensitive to excessive nutrients, toxic chemicals (including heavy metals, and pesticides), and/or sediments originating from agriculture and the aquaculture activity. Adults are sensitive, but less so. Likelihood is high and increasing (high certainty). Current spatial extent is most severe in Southern Maine, but expanding along coast along with development of the aquaculture industry, so actionability is moderate, i.e. the threat can be minimized in newly developing areas expanding into the geospatial range of this species.

IUCN Level 2 Threat:      Domestic and Urban Waste Water

Severity: Severe

Actionability: Moderately actionable

**Notes:** Echinoderm larvae are exceptionally sensitive to excessive nutrients, toxic chemicals (including heavy metals and pesticides), and/or sediments originating from water-borne sewerage and non-point run-off from housing and urban areas. Likelihood is high and increasing (high certainty), current spatial extent is most severe in Southern Maine, but expanding along coast, so actionability is moderate, i.e. the threat can be minimized in newly developing areas expanding into the geospatial range of this species..

IUCN Level 2 Threat:      Industrial and Military Effluents

Severity: Severe

Actionability: Moderately actionable

**Notes:** Oil spills are toxic to species with intertidal distributions. Local scale spills have an unpredictable likelihood and actionability is moderate and influenced by response time to spills.

#### IUCN Level 1 Threat      Biological Resource Use

IUCN Level 2 Threat:      Fishing and Harvesting of Aquatic Resources

Severity: Moderate Severity

Actionability: Moderately actionable

**Notes:** Large-scale, unintentional by-catch of commercial bottom trawling reduces this top predator population and subsequently results in decreased benthic diversity through trophic cascades and thus decreases the availability of food for other species. Likelihood is high (high certainty) and large-scale (throughout the region), so actionability is low, but moderate in new areas for developing bottom trawl fisheries.

## *Crossaster papposus* (Common Sun Star)

### Priority 2 Species of Greatest Conservation Need (SGCN)

Class: *Asteroidea* (Sea Stars)Order: *Valvatida* ()Family: *Solasteridae* ()

#### IUCN Level 1 Threat      Climate Change and Severe Weather

##### IUCN Level 2 Threat:      Habitat Shifting or Alteration

**Severity:** Severe**Actionability:** Actionable with difficulty

**Notes:** Common Sun Stars are cold-water species. Ocean acidification results in decreased survivorship of larvae, and growth and feeding by adult sea stars. Likelihood is high and large scale. The ability to mitigate ocean acidification is low.

##### IUCN Level 2 Threat:      Temperature Extremes

**Severity:** Severe**Actionability:** Actionable with difficulty

**Notes:** Increased water temperatures have interactive effects with ocean pH decreasing growth rate of sea stars. Likelihood is high (high certainty) and large scale. Increased water temperatures are linked with lethal disease. Likelihood is unpredictable based on disease agent and thus can range from small to large-scale. The ability to mitigate sea temperature change is low.

#### IUCN Level 1 Threat      Invasive and Other Problematic Species, Genes and Diseases

##### IUCN Level 2 Threat:      Invasive Non-native-Alien Species-Diseases

**Severity:** Moderate Severity**Actionability:** Actionable with difficulty

**Notes:** Invasives such as encrusting colonial tunicates (*Didemnum vexillum*) could decrease availability of sea star prey, habitat and have other effects largely unknown at this time. Likelihood is high and large scale (throughout the region), so actionability is low.

### Species Level Conservation Actions Assigned to Common Sun Star:

None. *Only species specific conservation actions that address high (red) or medium-high (orange) priority stressors are summarized here.*

### Conservation Actions Associated with the Echinoderms Guild:

|   |                           |                                  |                       |
|---|---------------------------|----------------------------------|-----------------------|

Habitat Shifting or Alteration

### **Broad Taxonomic Group Conservation Actions:**

Additional relevant conservation actions for this species are assigned within broader taxonomic groups in Maine's 2015 Wildlife Action Plan: Element 4, Table 4-1.

### **Habitat Based Conservation Actions:**

Additional conservation actions that may benefit habitat(s) associated with this species can be found in Maine's 2015 Wildlife Action Plan: Element 4, Table 4-15. Click on the Habitat Grouping of interest to launch a habitat based report summarizing relevant conservation actions and associated SGCN.

*The Wildlife Action Plan was developed through a lengthy participatory process with state agencies, targeted conservation partners, and the general public. The Plan is non-regulatory. The species, stressors, and voluntary conservation actions identified in the Plan complement, but do not replace, existing work programs and priorities by state agencies and partners.*
